

WOLFBANE¹ ALPHA ATTACKED!

153 fy

Last week we told you about WolfBane¹ Alpha being attacked by an unknown force. New this week, more details about those attacks.

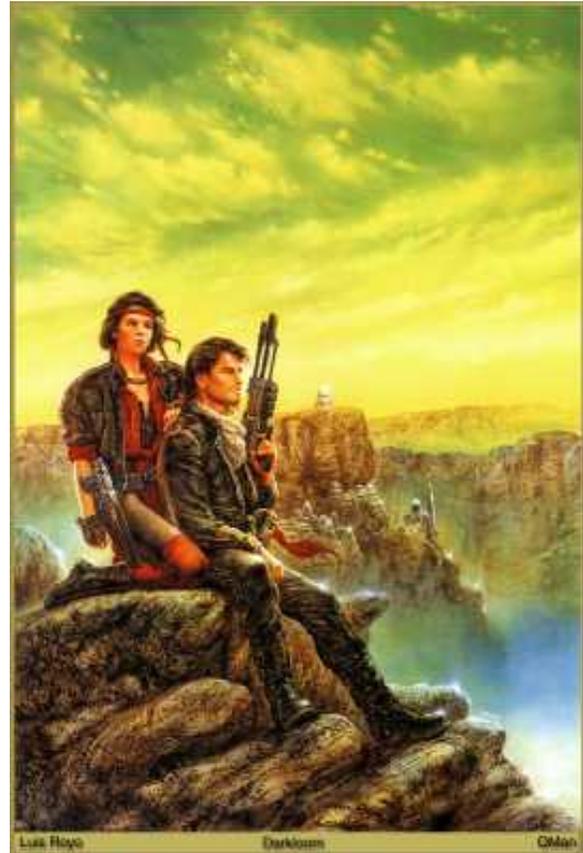

Brought to you via CommLinks from Dixon's Star, we bring you the only images allowed out of the WolfBane¹ Alpha sector.

No one is telling who or why the attack was pressed. We still have no other information at this time other than that the secretive special operations team known as the Rangers are on full alert and have sealed off all the surrounding space to WolfBane¹ Alpha with TracerMines and Beacons to warn off all approaching ships that they will be attacked if they enter the protected area.

We have found out that the PGC are "NOT" the attackers of the WDC. If they are, no one, not even WDC will comment on it.

Truane's Star has updated us that he has seen a full-fledged alert with the Rangers all on Condition Red.

"We have seen the Rangers provide a tactical front for the WDC (whom backs the Rangers with much needed funds)." He stated last week that he hoped no innocents would be injured, and thus to this date none have been.

"The Rangers are a fully trained SpecOps (Special Operations) Team that trains very hard every day for just such an attack on the WDC," we quoted Zane Cole, a Ranger Special Operations Instructor.

"We are on full alert and have been told by the WolfeBane¹ Alpha President that we have full jurisdiction over the planet and over the attacks that have been placed upon us recently," Zane was also quoted saying when asked about who was going to find out what was going on recently.

Stay Tuned for more as this sad event takes its place in our current peaceful timeline.

1: The Original star system WolfBane (some places also seen as Wolfbane) was renamed to WolfeBane recently. There still may be more sources out there listing the old name. If my name is attached to it, it is this star system and should be referenced accordingly. (Timothy Norris 2014)
